

Introduction to Computers and Programming LAB-13 2014/12/31

✧ Your output must be in our sample output format.

1. Linked Lists

Use dynamic storage allocation (malloc) to implement linked lists taught at Ch17 to store N elements of integer number which user input and print them all in order or reverse order.

```
Input N:5
store into the linklist:
1 2 3 4 5
print from the linklist:
5 4 3 2 1
```
